FAQ

2. Getting Started

SECTION 01

Server Recommended Settings / Requirements

In order to successfully run Craft Beer on your website your server environment will have to meet certain PHP and WordPress minimal version requirements.

PHP 5.4.X or higher

Craft Beer requires php 5.4.X or higher installed on your server.

In order to check your php version we recommend one of two methods:

- If you do have WordPress installed, you can use WordPress `phpinfo()` plugin and check the [WordPress php version](#)
- If you do not have WordPress installed [check php version without WordPress instance](#).

If neither of these options work for you, please consult your hosting provider regarding the php version you are running on your server.

MEMORY LIMIT 64M or higher (Recommended 96M)

You can have a closer look at how to increase the PHP memory by referring to the following article: [Fix WordPress memory exhausted error increase php memory](#).

MAX UPLOAD SIZE 35M or higher

You can have a closer look at how to increase the PHP memory by referring to the following article: [Fix WordPress memory exhausted error increase php memory](#).

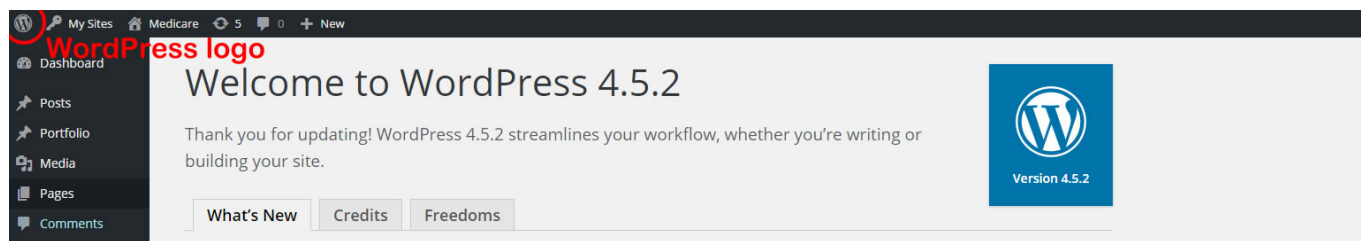

Optional settings for PHP.INI file:

```
post.max_vars = 5000
request.max_vars = 5000
max_execution_time = 300
```

WordPress version

Although the theme will run on older versions of WordPress we highly recommend WordPress 4.4.X or later.

In order to check which version you are running, please click on the WordPress icon in the upper left corner of your wp-admin console.

SECTION 02

Installing WordPress

If you've recently purchased a hosting plan and a domain name, the next step is to install WordPress CMS on your server.

The best option is to start with fresh WordPress installation.

If you've recently purchased a hosting plan and a domain name, the next step is to install WordPress CMS on your server. Here are a few links to help you start your website's back-end and get your site ready for installing the theme:

A step by step guide: [How to install WordPress](#).

If you plan on using our theme on a local WordPress development and migrating your site live later on, this is a useful link that shows how to create a local WordPress development environment: [Installing WordPress on a Local Server Environment](#).

If you're switching to a new domain please refer to the following link to make sure that all the necessary steps are taken: [How to Properly Move WordPress to a New Domain Without Losing SEO](#).

http://codex.wordpress.org/Installing_WordPress
- Reach out to the worldwide WordPress community: <https://codex.wordpress.org/>

SECTION 03

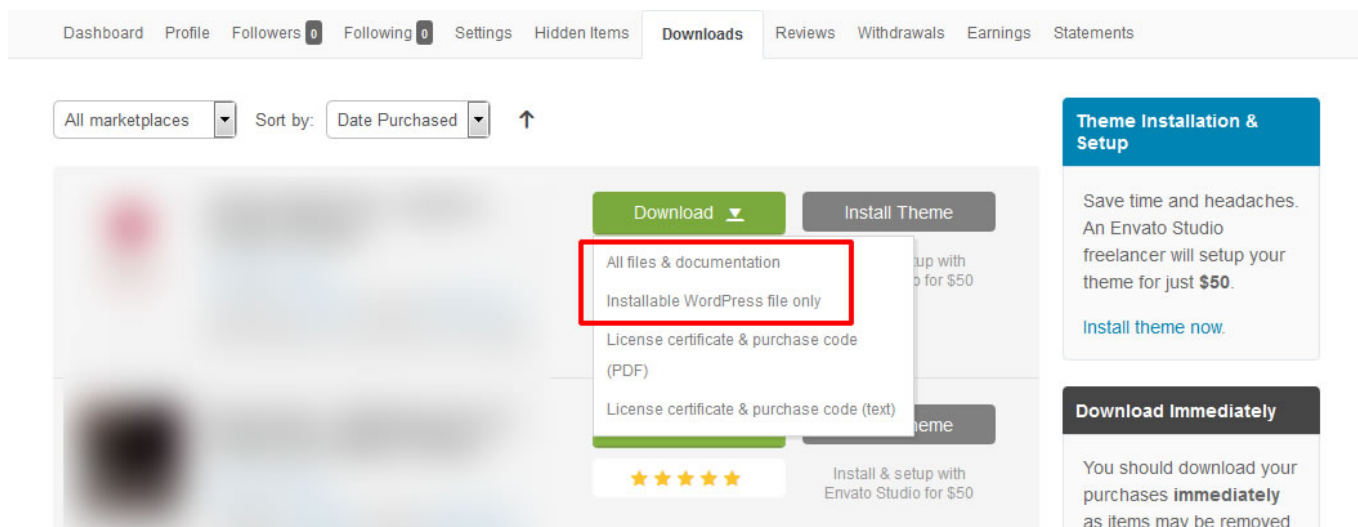

Installing Craft Beer

After you have installed WordPress and purchased the theme, you should go to a download tab on ThemeForest:

You have 2 options for downloading your theme:

- All files and documentation (Complete Zip archive)
- Installable WordPress file only.

Please download both archives.

All files and documentation package contains all files provided with the theme, including this document.

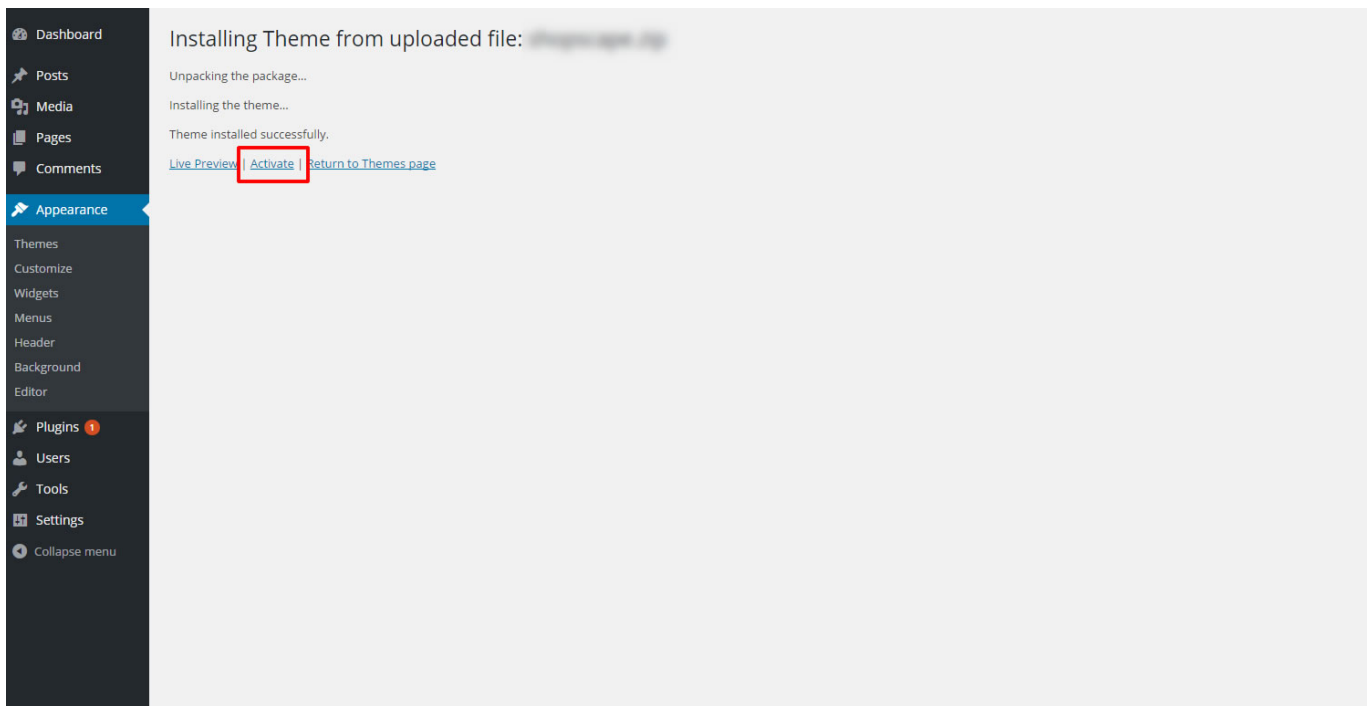

Installable WordPress file only should be used in the process of Theme installation.

There are two methods of installing a theme onto your WordPress site. You can use the WordPress Admin panel to upload and install the theme, or you can use FTP software instead.

WordPress Theme Installation

To install the theme directly from the WordPress admin panel, please first log-in to your wp-admin console

1. Navigate to Appearance > Themes
2. Click Add New
3. Click Upload Theme
4. Click Choose File
5. Find the package you have downloaded from ThemeForest as Installable WordPress file only on your local computer
6. Click Install Now and the installation will begin. You can monitor the installation process in the lower left corner of your browser.
7. Once the installation is complete you will see the following screen:

8. Click Activate

9. You should see the list of themes installed in your WordPress instance with the Craft Beer activated.

Congratulations! You've successfully installed and activated Craft Beer WordPress Theme on your website. Proceed to install plugins and either add your own content or import the demo content to get your site up and running in no time.

FTP Installation

To install the theme using FTP software, log in to the server where your WordPress website is hosted. First extract the "craft-beer" folder from Installable WordPress file only package that you received in your installation pack. Now connect to your server via FTP and navigate to the /wp-content/themes/ directory under your WordPress website's root location. Upload craft-beer folder to the themes folder on your remote server.

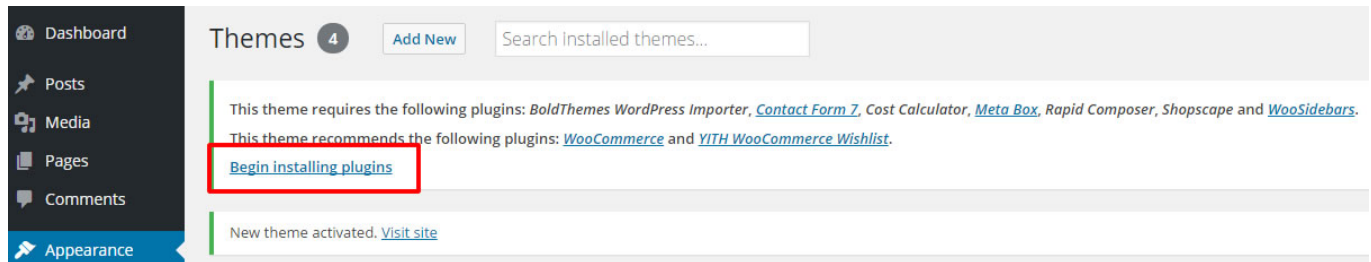

Once the theme is uploaded, you need to activate it. Go to 'Appearance > Themes', find Craft Beer and click 'Activate' button.

Congratulations! You've successfully installed and activated Craft Beer WordPress Theme on your website. Proceed to install plugins and either add your own content or import the demo content to get your site up and running in no time.

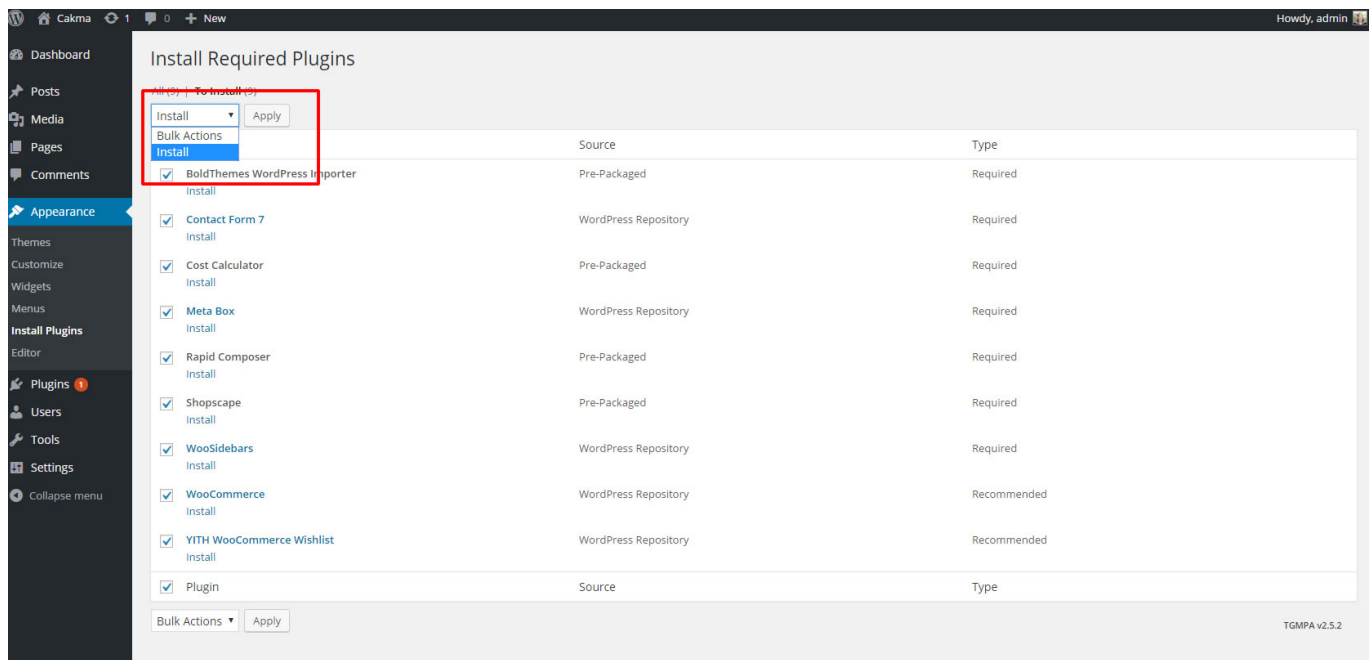

Installing Required Plugins

Once you have WordPress and the theme installed, you're required to install the necessary plugins to successfully run our theme on your website (Bold Builder, theme's plugin and the rest).

Upon installing and activating theme in Appearance > Themes panel you will get a notice at the top of your admin panel saying that the theme requires certain plugins. Click on Begin installing plugins.

WordPress redirects you to the Install Required Plugins page. Select all plugins, choose Install and click Apply.

Once the installation is complete the following screen will appear. Click Return to the Dashboard at the bottom of the screen.

<input type="checkbox"/>	Plugin	Description

Note: WooCommerce and WooCommerce Whishlist are recommended plugins. We strongly encourage you to install them even if you do not intend to use them since demos with WooCommerce assets can be imported only if these plugins are installed and activated. Once you import the demo, you can deactivate and uninstall them.

The best way to start is to install demo content. If you want to install demo content please go to next section – Installing Demo Content.

SECTION 05

Installing Demo Content

The best practice is to start with fresh WordPress installation or use WordPress Database Reset plugin to clear your WordPress instance of previously existing content.

Note: Please keep in mind the following:

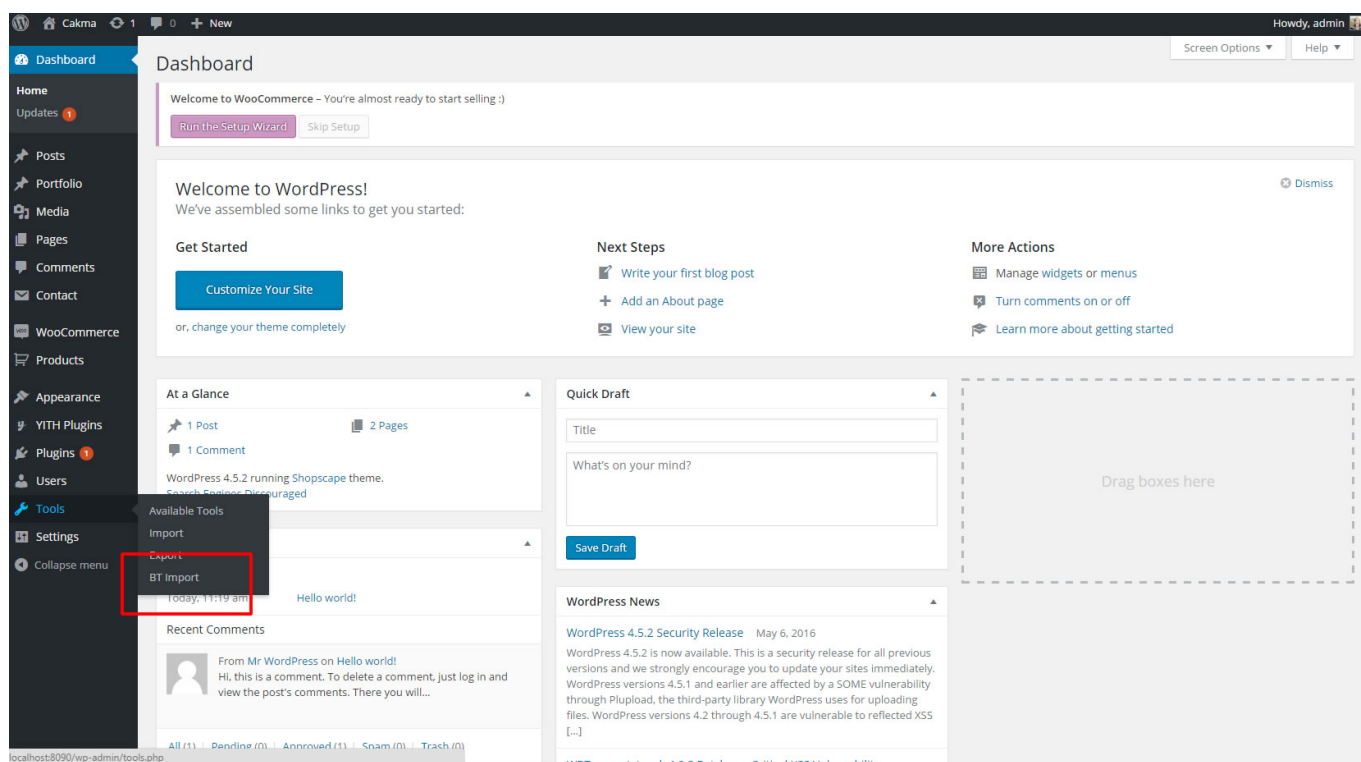

Import of demo content will delete all existing posts, pages and menus.

The best practice is to start with fresh WordPress installation or use [WordPress Database Reset plugin](#) to clear your WordPress instance of previously existing content.

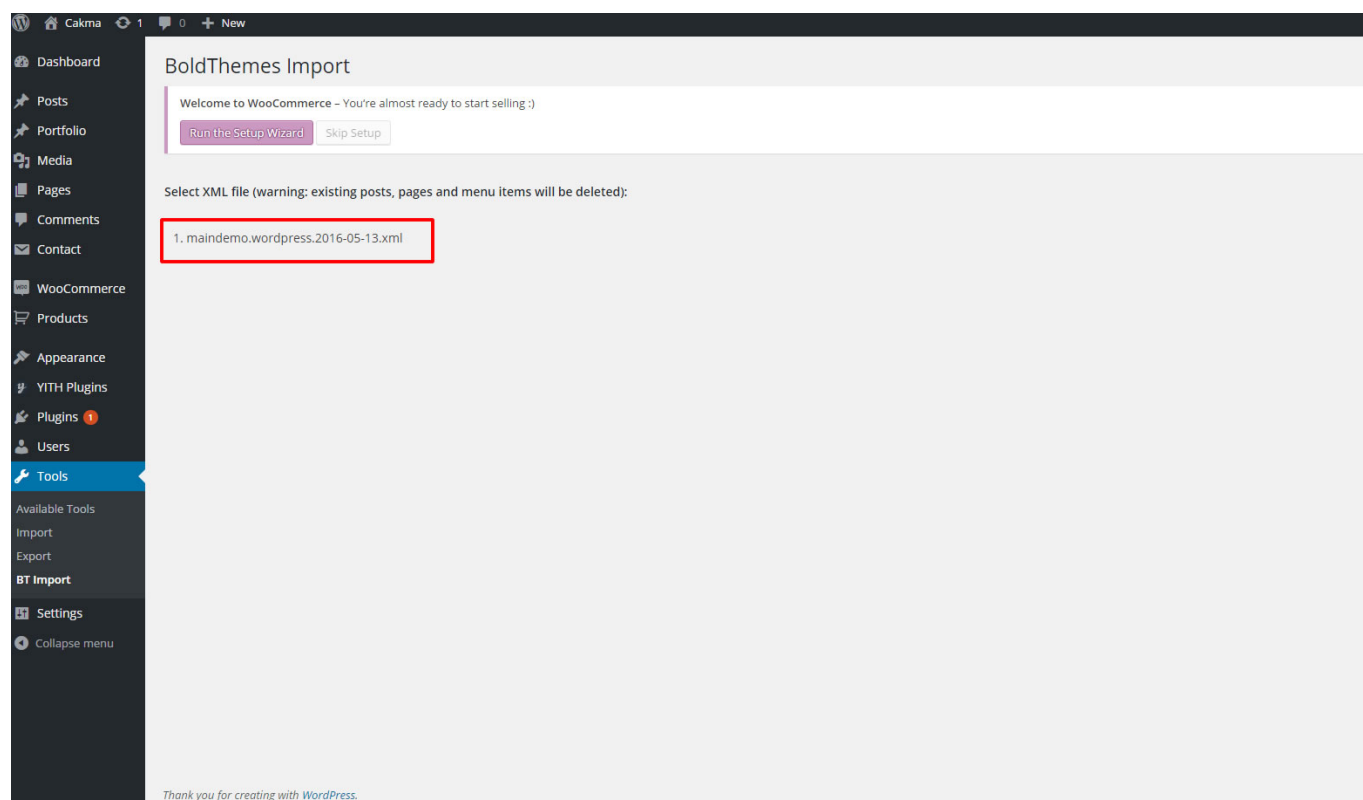

Note: Since demo contains WooCommerce demo data, please make sure to install and activate it prior to activating the import or the import will fail. If you do not intend to use WooCommerce, feel free to deactivate them and uninstall it later on, but it has to be activated prior to import.

The procedure is as follows:

1. Login to the wp-admin panel
2. Go to Tools > BT Import

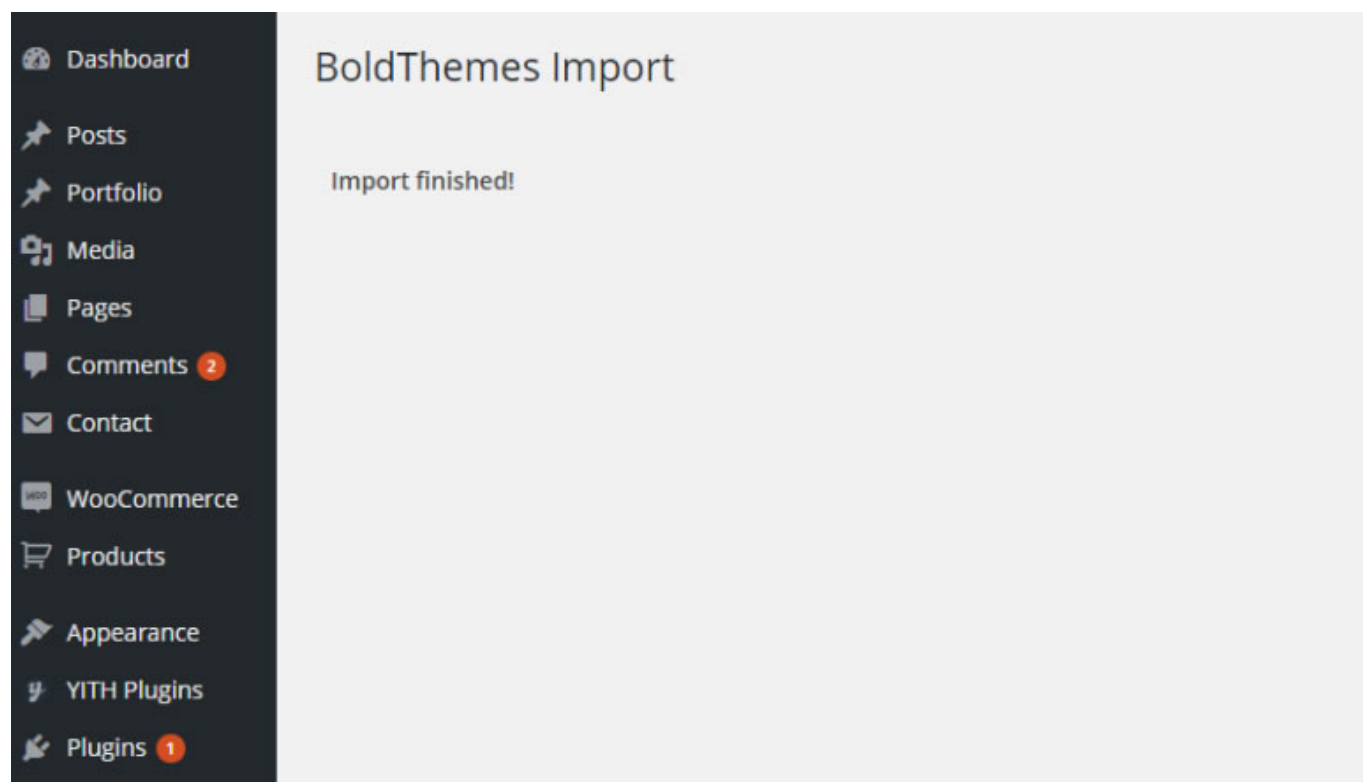

3. Choose the demo XML and click on it (warning: existing posts, pages and menu items will be deleted).

4. Go to 'Tools > BT Import' and select demo which you want to install.

5. Please wait until you get the message that import is finished.

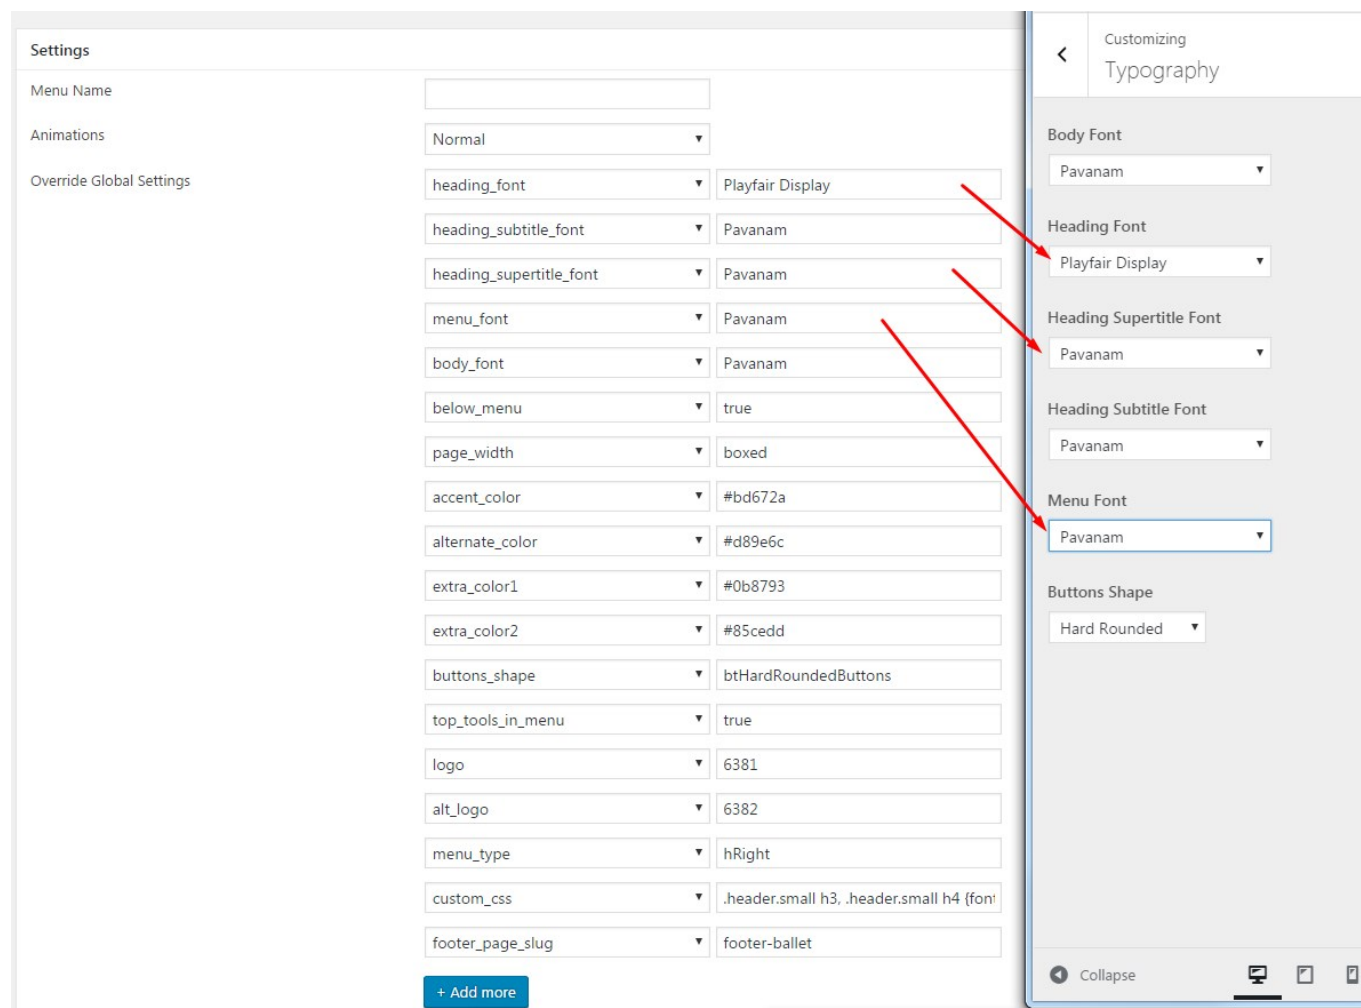

6. Since imported demo with WooCommerce content, go to WooCommerce > Settings > Products > Display and select Shop as Shop Page; open Checkout tab and select Cart as Cart Page and Checkout as Checkout Page; open

Accounts tab and select My Account as My Account Page.

Congratulations! You have successfully imported the demo. If you click on visit Site in wp-admin header, you should see your site with demo content imported.

When you decide which Homepage version are you going to use, than please follow the next steps:

1. In the chosen Home page editor locate the Override Global Settings – at the bottom of page editor.
2. All the settings (logo, alternate logo, colors, menu type, typography etc.) should be set the same in Customization panel. Have a look at the following example:

ARTICLE 06

Common Issues And Troubleshooting with theme install

In this section we will describe the most common errors that can occur when installing the theme, and provide solutions for each one.

Broken Theme And/Or Stylesheet Missing

An error message while installing or activating a WordPress theme usually means that the incorrect file(s) were uploaded.

The exact error message may vary, however it will typically include the words, 'Broken Theme' or 'Stylesheet Missing'. A similar message will appear if you're using a plugin that has minified all the CSS files, including the theme's or child theme's default style.css file, which should be left intact according to WordPress regulations.

The solution is to review which file you were uploading – please refer to section Installing Craft Beer Theme for instructions which files to use in the process.

Also, you can find more about this error and how to fix it here: <https://help.market.envato.com/hc/en-us/articles/202821510>

Blank Dashboard – White Page

This issue is most commonly related to either php version (required php version is 5.4.X or higher) on your server or WordPress memory limit and its value being too low on your server.

Please read this article and increase the WP memory limit: [Fix: WordPress Memory Exhausted Error – Increase PHP Memory](#).

If the issue persists upon adjusting the WordPress memory limit, we recommend enabling WordPress debug mode to track down the cause of this error and resolve it. To enable debug mode, please go to the WordPress installation folder on your server using FTP software and open the wp-config.php file in a text editor. Find this line of code:

```
define('WP_DEBUG', false);
```

Adjust the code so that WP_DEBUG is set to true:

```
define('WP_DEBUG', true);
```

Save the file, re-upload it back to your server and check for issues.

Please refer to the following article about WP_DEBUG mode: https://codex.wordpress.org/WP_DEBUG

Parse error: Syntax error, unexpected T_STRING

If you get the error similar to this:

```
Parse error: syntax error, unexpected T_STRING in /wp-content/themes/eventim/php/BTCrushFunctions.php on line 7 keep in mind that this issue is most commonly related to php version (required php version is 5.4.X or higher).
```

You need to update your php version to the required one.

Parse error: Syntax error, unexpected T_FUNCTION

If you get the error similar to this:

```
Parse error: syntax error, unexpected T_FUNCTION in /wp-content/themes/medicare/functions.php on line 39 keep in mind that this issue is most commonly related to php version (required php version is 5.4.X or higher).
```

You need to update your php version to the required one.

Common Issues And Troubleshooting with Demo content

In this section we will describe the most common errors that can occur when importing the demo, and provide solutions for each one.

Error. This demo contains WooCommerce data. Please install and activate WooCommerce.

As it was mentioned in 2.5 Installing Demo Content section, some of the demo contains WooCommerce demo data, which is way WooCommerce should be installed and activated. Navigate to Plugins > Add New and in Search plugins field type WooCommerce (author WooThemes). Install it, activate it and then continue importing demo content.

I got the red colored Internal Server Error Message. What should I do?

On some hosting environments (HostGator, GoDaddy) there is an issue with the resources dedicated to a single instance of Shared Hosting. While trying to prevent a single instance to compromise others in Shared Hosting environment, they set the limits too low. Especially limits related to memory and processing power.

As a first step, please try to set Server Recommended Settings and try the import again.

If that does not work, most probably the hosting limit prevents creation of thumbnails for images larger than 60-70k.

The consequence is that you will not be able to see the thumbnails in your Media Library although the images are there (thumbnail was not created) and you will not get optimized images for different elements on the site. You will get the original ones which are usually not optimized for the placeholder they have been put in.

In order to import the demo in such environment, you need to repeat it over and over again. The import is incremental process and eventually it will finish (it usually takes 30 or more retries since it will crash on the import of each image larger than 60kb). You can check the progress by refreshing Media Library window – each retry should add one or more images (the ones with 60kb and more will be grey while the smaller ones will have a proper thumbnail).

Once the import finishes you will have a functioning demo, but we strongly recommend to resolve the resources issue with the hosting or change it since it will almost certainly create other problems in the future.

I get Error 404 (Page not found) for all pages except the home page of the site. What should I do?

Try to recreate permalink structure by going to Settings > Permalinks, changing it to Post name for example, saving the settings, than changing it back to Day and name and saving it again.

Images on my demo site are low quality. Why is that?

Demo imports come with low quality images for two reasons – one is the speed of import and the second is that images are not licensed for third party use, just for demo presentation purposes.

Distributing production quality images with our demos would be a violation of the license terms on our part.

If you would like to use the same images as on our demo for your final site, please let us know and we will provide you the links and ids of used images on Shutterstock.

If you like our product please consider [leaving us a rating](#). A huge thank you from BoldThemes in advance!

3. Theme Customization

INTRODUCTION

Theme Customization

Theme uses native WordPress Customizer for General theme options. In order to access WordPress Customizer please select 'Appearance > Customize' in wp-admin console.

On the left side of the screen you will see the menu with various options and on the right side you will see website preview. Any settings you change in the Customizer will affect entire website, which means all posts and pages, so we are referring to them as global customization settings.

Each change you make will automatically update website preview (page will be refreshed). When you are satisfied with the result click 'Save & Publish' and do not forget to make final preview outside customization frame and logged out of WordPress to see how the site would look like to your visitors.

The important feature of Law Firm is that any global setting can be overridden on any single post or page using setting keys which you will find in squared brackets next to setting names on the following pages.

In angle brackets you will find possible values of setting keys. You will learn more about this overriding soon. Now, let's explore customization settings.

SECTION 01

General Settings – WordPress Customizer

On General settings panel you will find the following options:

Logo

```
[logo] <attachment ID>
```

Here you should select main website logo. It is displayed pages next to the menu, on preloader screen and on sticky header.

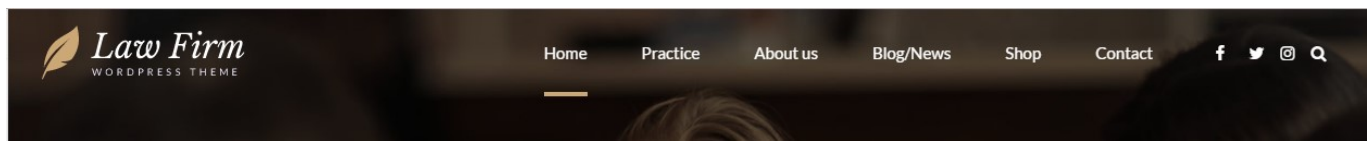

Alternative Logo

```
[alt_logo] <attachment ID>
```

Here you should select website alternative logo.

This is usually light version of logo (which is supposed to be used on dark backgrounds). The logic is this:

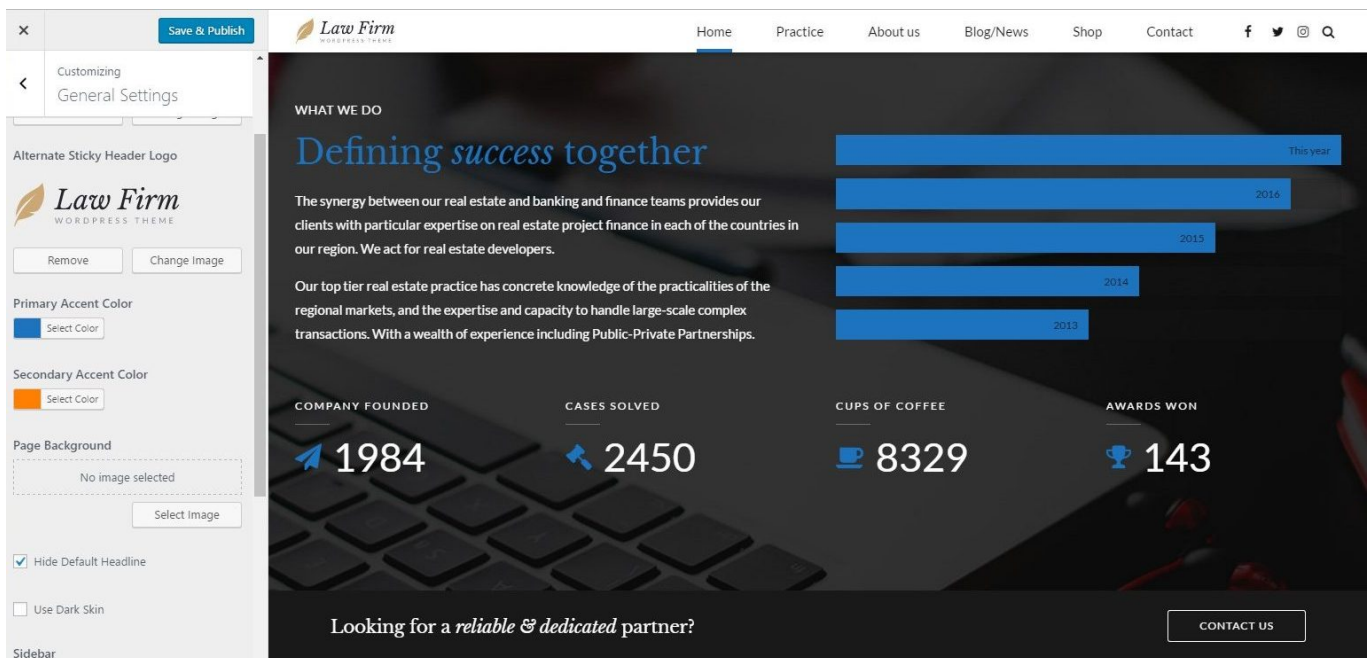

1. If you do not have Alternative logo defined, main logo will be used in all cases
2. If you have Alternative logo defined, it will be used on top of the page when Content Below Menu and Sticky Header options are activated. This set up will also change the color of menu and widgets to light.

Primary Accent Color

[accent_color] <#hexadecimal color code>

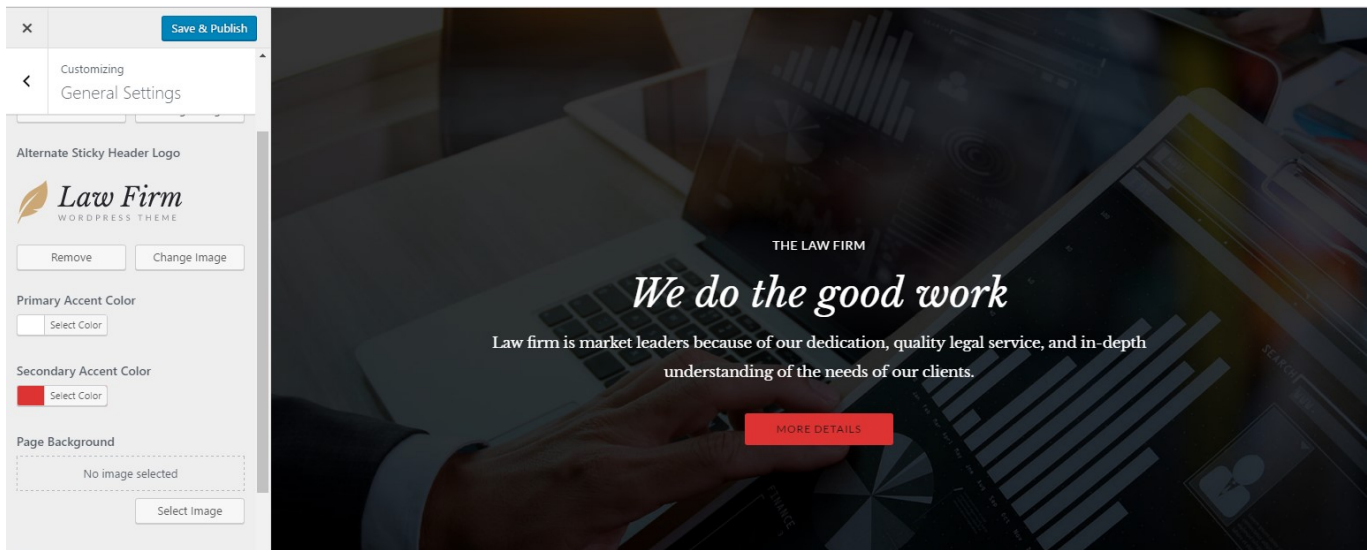

Accent color is used as a color for links, icons, etc. If you define it, the accent color will influence the general color scheme of the site.

Secondary Accent Color

[alternate_color] <#hexadecimal color code>

Another color which influences general color scheme of the site is alternate color. Alternate color can be assigned as a color for buttons, icons, etc. If you define it, all elements with assigned alternate color will be affected.

Page Background

[page_background] <attachment ID>

Page background image is a static image which serves as a site background if defined.

Hide Headline

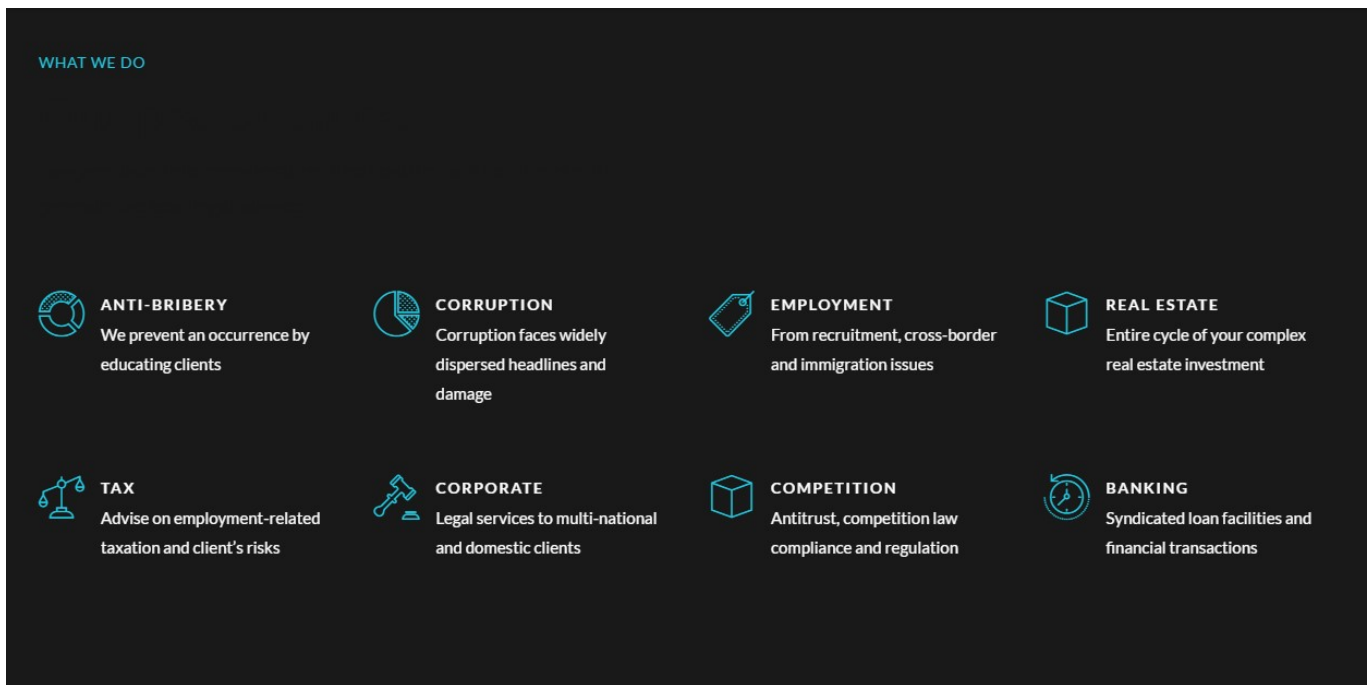

[hide_headline] <true/false>

This option enables you to display navigation breadcrumbs at the top of the screen. In most user scenarios this option should be to true (checked).

Use Dark Skin

[template_skin] <true/false>

This is another option which influences general color scheme of the site. Law Firm features two general skin styles – light and dark. The light skin has white colored background and dark colored main font and other ui elements. On the other hand, dark skin has dark colored background and light colored fonts.

Sidebar

```
[sidebar] <no_sidebar/left/right>
```

This option enables you to define if the sidebar will be visible globally or not.

By customizing this option, user can globally enable (place it on the right or left side) or disable sidebar. Sidebar content can be edited under Appearance > Widgets (from main WordPress menu).

You can choose one of three predefined sidebar layouts:

1. No Sidebar – No sidebar is displayed
2. Left – Sidebar is displayed on the left side of main content
3. Right – Sidebar is displayed on the right side of main content.

Page Width

```
[page_width] <no_change/btBoxedPage>
```

This option enables you to define if the page width will be full width (default) or boxed.

Use Dash in Sidebar Widgets

[sidebar_use_dash] <true/false>

This option enables you to define if separator will be used below the widget titles or not. By changing this option, users can globally enable or disable the separator in widgets. Please check this option if you want to use separator in widgets.

Disable Preloader

[disable_preloader] <true/false>

This option enables you to define if the preloading animation will be displayed globally throughout the site or not. By changing this option, users can globally enable or disable the preloader animation.

Preloader Text

[preloader_text] <any text>

This option enables you to define the text on preloading screen. The preloader needs to be enabled in order to see the effect of this option.

Please Wait...

Fullscreen Animations Autoplay Interval (ms)

[autoplay_interval] <any text>

Law Firm theme features full screen slide layout with numerous transition options (more than 100 of in and out animations). This option enables you to define the length of full screen transitions in milliseconds.

Custom JS

[custom_js] <custom JS code>

This option enables you to define global Custom JS code. Enter any JS code you want here and it will be embedded in the <head> element of all pages throughout the site.

This is where you should paste your custom site wise JavaScript, such as Google Analytics script.

Reset Theme Settings

This is not really a setting, so no override. Reset button will just reset all global settings to default values.

SECTION 02

Site Identity

Under “Site Identity” panel in Customizer, you can set Site Title, Tagline and Site Icon. When working with site icon, please pay attention to recommended Icon size.

You'll see the changes in the preview pane to the right. When you're done, click Save and Publish.

SECTION 03

Header and Footer

On Header and Footer settings panel you will find the following options:

Logo Height (in px)

`[logo_height] <in pixels>`

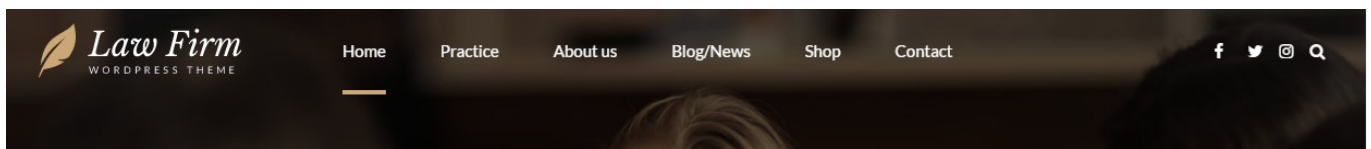

Adding the required px number logo will decrease/increase.

Menu Type

`[menu_type] <horizontal-left/horizontal-center/horizontal-right/horizontal-below-left/horizontal-below-right/vertical-left/vertical-right>`

Law Firm theme features numerous header layouts giving you a great degree of freedom when it comes to customization of your site. The menu type options include:

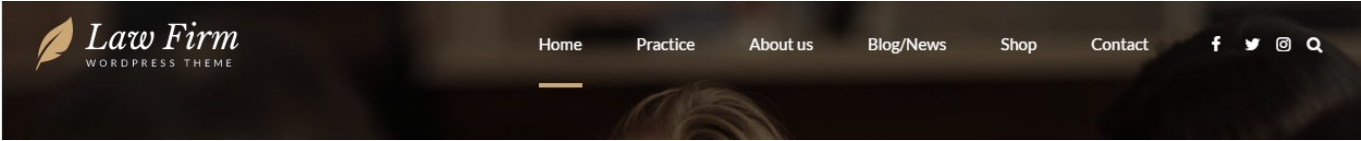

1. Horizontal Left menu

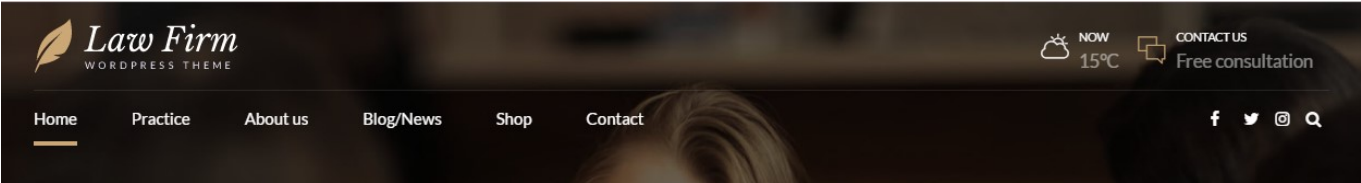

2. Horizontal Centered menu

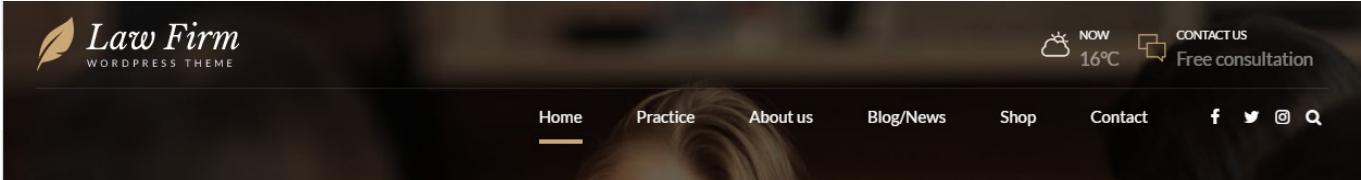

3. Horizontal Right menu

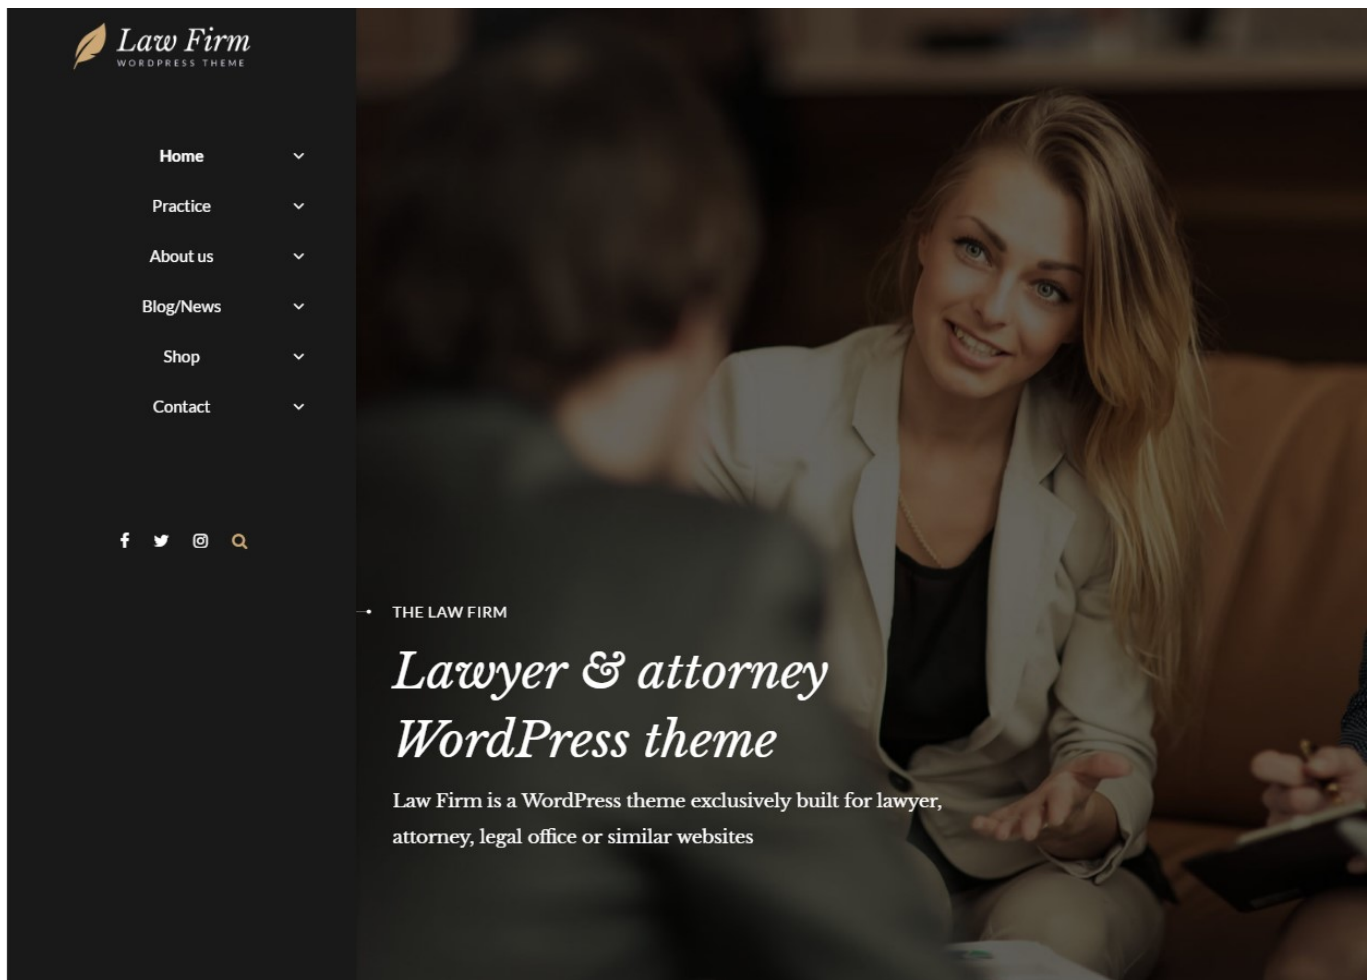

4. Horizontal Left Below Logo

5. Horizontal Right Below Logo

6. Vertical Left

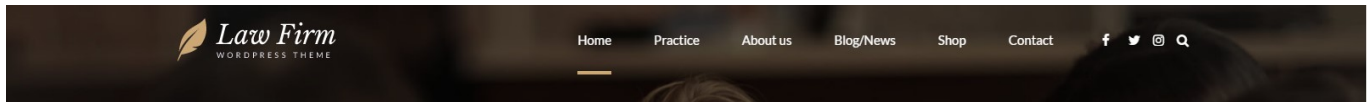

7. Vertical Right

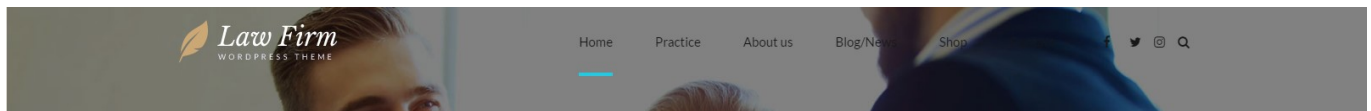

Header Style

[header_style] <transparent-light/transparent-dark/accent-dark/accent-light/light-accent/light-dark>

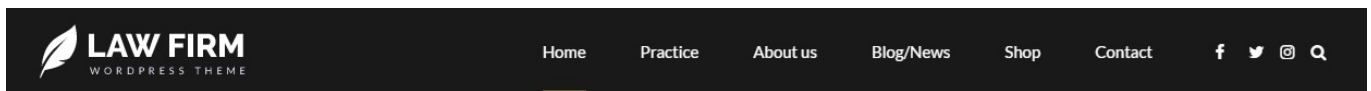

1. Transparent Light

2. Transparent Dark

3. Accent + Dark

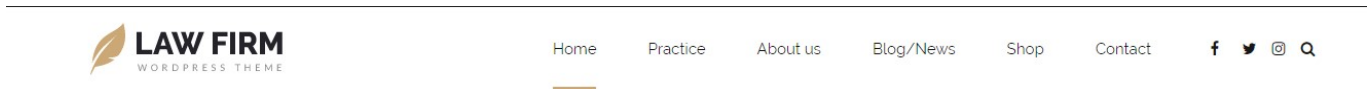

4. Accent + Light

5. Light + Accent

6. Light + Dark elements

Boxed Menu

[boxed_menu] <true/false>

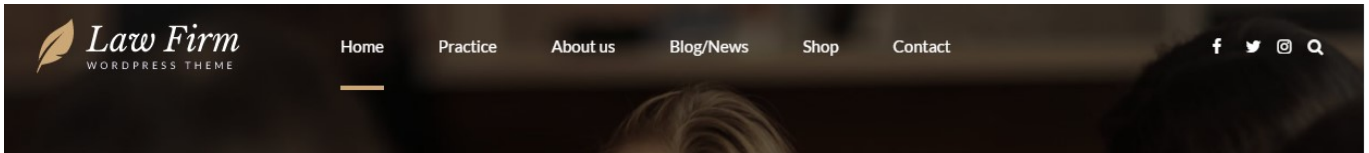

Boxed menu means that the header content (including menu) will be fitted into the page wrap of 1336px.

If the menu is boxed it will be fitted into this width. If it is not boxed, that means that it will be stretched across entire viewport.

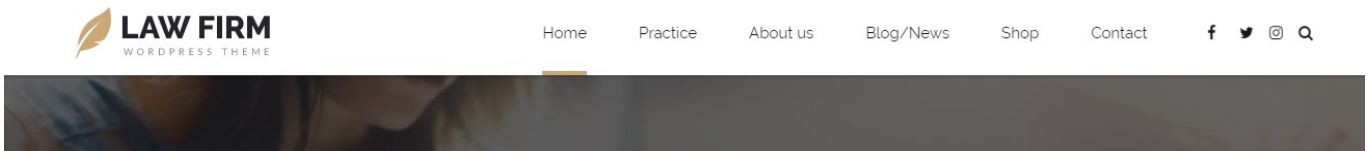

Show Content Below Menu

[below_menu] <true/false>

This setting provides another header layout option. If the content flows below menu, the menu will be over the top section of the page.

If this option is set to false, the menu will be above the top section.

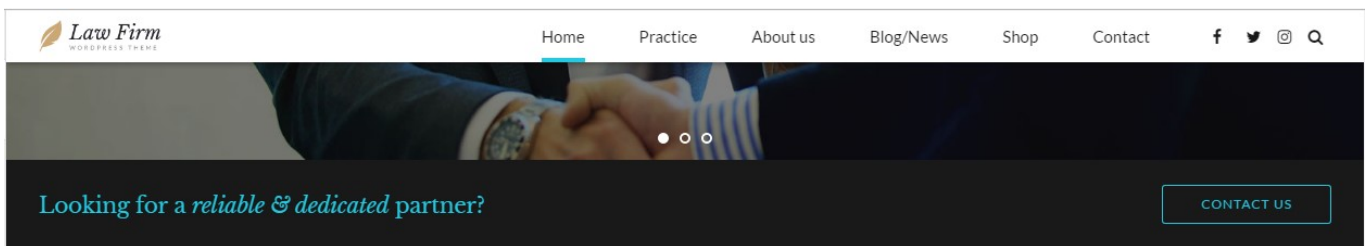

Check if you want to show content below menu.

Use Sticky Header

[sticky_header] <true/false>

Sticky header will stay at the top even when you scroll down the page. Make sure to check this option if you want the sticky menu active.

Hide Menu on Load

[hide_menu] <true/false>

Law Firm theme allows you to hide (collapse) the menu. This means that the menu is going to be initially collapsed. The user can always expand it by clicking on the menu icon.

Use Dark Skin in Footer

[footer_dark_skin] <true/false>

This option allows you to define the overall color scheme of the footer area

Available options are:

1. Light – this will set the main footer color scheme to light:

Designed by Bold Themes 2017

2. Dark – this will set the main footer color scheme to dark:

Designed by Bold Themes 2017

Custom Footer Text

[custom_text] <any text>

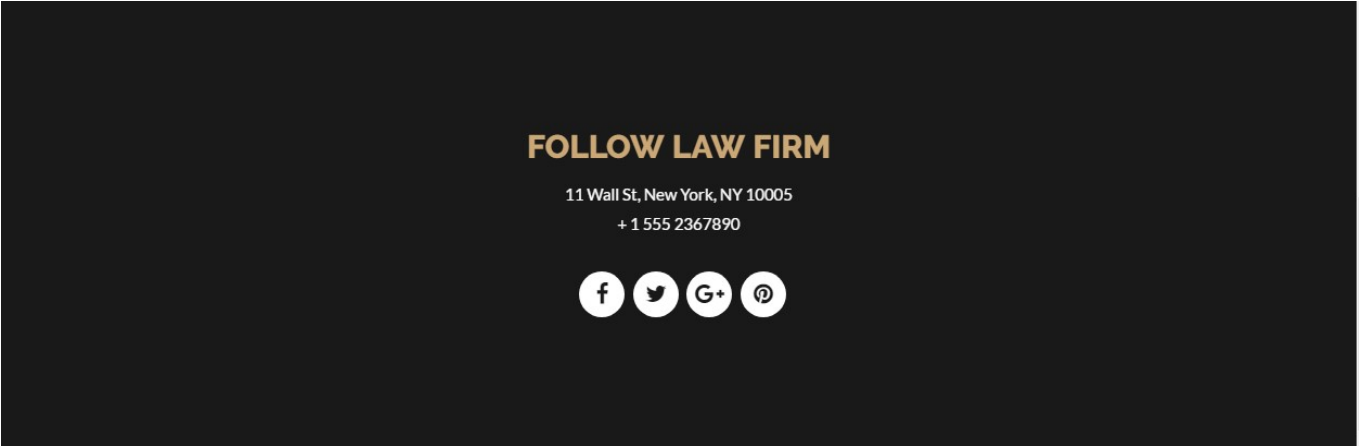

Any text entered here will shown in footer, e.g. copyright notice.

Footer Page Slug

[footer_page_slug] <page slug>

Law Firm has a unique way of enabling you to create custom footer pages. You can create a static page, add content to it and set desired global settings overrides. Then you can use it as a template for all pages.

The field Setting page slug should contain the slug of your page which serves as a template. Once you add the slug to this field, footer on all pages will inherit settings and shortcodes of the referenced page.

SECTION 04

Typography

On Typography settings panel you will find the following options:

Body Font

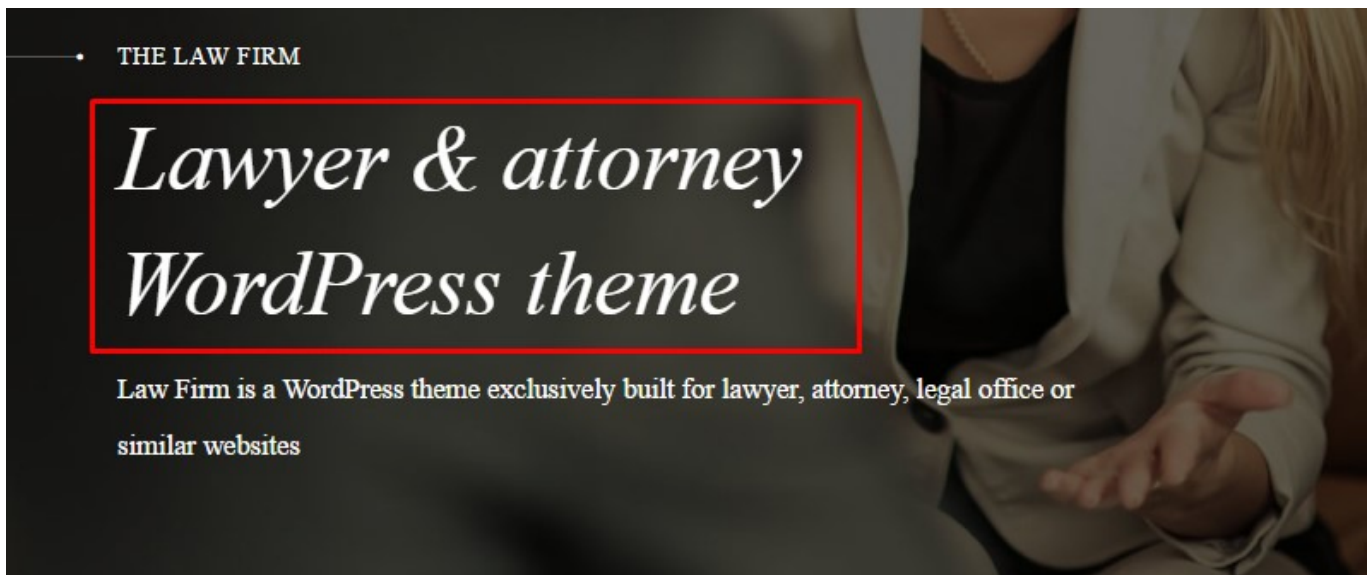

[body_font] <no_change/any Google font>

Body text font. Using this setting you can set the main font family that'll be applied throughout the website. Law Firm uses [Google webfonts](#).

Heading Font

[heading_font] <no_change/any Google font>

Heading text font. Using this setting you can set the font family for Main Headings

Heading Supertitle Font

[heading_supertitle_font] <no_change/any Google font>

Heading Supertitle text font. Using this setting you can set the font family for supertitles in Main Headings.

Heading Subtitle Font

[heading_subtitle_font] <no_change/any Google font>

Heading Subtitle text font. Using this setting you can set the font family for subtitles in Main Headings.

• THE LAW FIRM

Lawyer & attorney WordPress theme

Law Firm is a WordPress theme exclusively built for lawyer, attorney, legal office or similar websites

Menu Font

[menu_font] <no_change/any Google font>

Using this setting you can set the font family for menus.

Button Shape

[buttons_shape] <hard-rounded/soft-rounded/square>

1. Hard Rounded

READ FULL BIO >

2. Soft Rounded

READ FULL BIO >

3. Square

READ FULL BIO >

SECTION 05

Blog

On Blog settings panel you will find the following options:

Grid Gallery Columns

[blog_grid_gallery_columns] <2/3/4/5/6>

Here you can define the number of columns for grid gallery on single posts. On [this](#) example, three columns were set.

You can set the post grid gallery format by choosing Gallery as Post format, add the images to the post in the settings pane and check the Grid Gallery setting.

Listen to your customers – they will tell you all about advice

March 22, 2017 / by admin / 0

Completely synergize resource taxing relationships via premier niche markets. Professionally cultivate one-to-one customer service with robust ideas. Dynamically innovate resource-leveling customer service for state of the art customer service.

Objectively innovate empowered manufactured products whereas parallel platforms. Holistically predominate extensible testing procedures for reliable supply chains. Dramatically engage top-line web.

Grid Gallery Gap

```
[blog_grid_gallery_gap] <no_gap/small/normal/large>
```

You can define gap between grid gallery items in pixels using this setting. In the example above the gap is 10px. If you choose 0, the images will be “glued to each other” without any gap in between.

Archive Layout

```
[blog_list_view] <standard/columns/simple>
```

Law Firm offers three layouts for blog archive pages – standard, columns and simple. Please take a look at the following examples of these layouts:

1. [Standard Layout](#)
2. [Columns Layout](#)

This setting lets you choose default layout for all Blog archive pages.

Single Post Layout

[blog_single_view] <standard/columns>

Law Firm offers two layouts for single blog post pages – standard and columns. Standard layout features post content in one column while columns layout introduces two columns – one for featured image / grid gallery / video, and one for the content itself.

Here is the example of standard layout:

Share on LinkedIn

[blog_share_linkedin] <true/false>

Share on VK

[blog_share_vk] <true/false>

Sharing options for single posts. If checked, the share icons will be present in posts.

Use Dash in Headlines

[blog_use_dash] <true/false>

Law Firm offers two types of headlines on blog archive pages and individual post pages.

Check to use dash separator in headlines.

Sticky Posts in Grid/Tiles

```
[sticky_in_grid] <true/false>
```

This option enables you to set if you want to show sticky posts in grid/tiles.

You can make a sticky post by checking the “Stick this post to the front page” option in the “Publish” section of Post editor.

If checked, the post will be placed at the top of the front page of posts, keeping it there until new posts are published.

Settings Page Slug

```
[blog_settings_page_slug] <page slug>
```

Law Firm has a unique way of enabling you to create custom templates for single post pages. You can create a static page, add content to it and set desired global settings overrides. Then you can use it as a template for single post pages.

The field Setting page slug should contain the slug of your page which serves as a template for blog posts. Once you add the slug to this field, all blog post will inherit settings and shortcodes of the referenced page.

So, in order to change template elements on blog posts, please locate the page with the slug entered in Settings Page Slug field and edit it.

SECTION 06

Portfolio

On Portfolio settings panel you will find the following options:

Grid Gallery Columns

```
[pf_grid_gallery_columns] <2/3/4/5/6>
```

Here you can define the number of columns for grid gallery on portfolio items. You can set the post grid gallery format by adding the images to the post in the settings pane and check the Grid Gallery setting.

Grid Gallery Gap

```
[pf_grid_gallery_gap] <no_gap/small/normal/large>
```

You can define gap between grid gallery items in pixels using this setting. In the example above the gap is 10px. If you choose 0, the images will be “glued to each other” without any gap in between.

Single Project view

```
[pf_single_view] <standard/columns>
```

Law Firm offers two layouts for portfolio single project pages – standard and columns.

This setting lets you choose default layout for all Portfolio single project pages.

Archive Layout

```
[pf_list_view] <standard/columns/simple>
```

Law Firm offers three layouts for portfolio archive pages – standard, columns and simple.

This setting lets you choose default layout for all Portfolio archive pages.

Share on Facebook

```

Sharing options for single portfolio items. If checked, the share icons will be present in posts.

Use Dash in Headlines

[pf_use_dash] <true/false>

Law Firm offers two types of headlines on blog archive pages and individual post pages.

Settings Page Slug

[pf_settings_page_slug] <page slug>

Law Firm has a unique way of enabling you to create custom templates for individual portfolio item pages. You can create a static page, add content to it and set desired global settings overrides. Then you can use it as a template for portfolio item pages.

The field Setting page slug should contain the slug of your page which serves as a template for portfolio items. Once you add the slug to this field, all portfolio items will inherit settings and shortcodes of the referenced page.

So, in order to change template elements on portfolio items, please locate the page with the slug entered in Settings Page Slug field and edit it.

SECTION 07

[shop_share_vk] <true/false>
```

Sharing options for single posts. If checked, the share icons will be present in posts.

Use Dash in Headlines

```
[shop_use_dash] <true/false>
```

Law Firm offers two types of headlines on blog archive pages and individual post pages. Header with the dash and header without it.

Check to use dash separator in headlines.

Settings Page Slug

```
[shop_settings_page_slug] <page slug>
```

Law Firm has a unique way of enabling you to create custom templates for individual product pages. You can create a static page, add content to it and set desired global settings overrides. Then you can use it as a template for individual product pages.

The field Setting page slug should contain the slug of your page which serves as a template for WooCommerce products. Once you add the slug to this field, all shop items will inherit settings and shortcodes of the referenced page.

So, in order to change template elements on individual product pages, please locate the page with the slug entered in Settings Page Slug field and edit it.

SECTION 08

Translation

In order to translate the theme, please follow the next steps.

POT file is in languages folder. You can use [Poedit](#) or some similar tool to translate the theme. Keep your .po and .mo files in the same folder (languages). If you are not sure how to do it take a look at the article: [How to Translate a WordPress Theme](#).

Also, make sure to translate the Law Firm plugin as well. Repeat the steps as for the theme.

SECTION 09

Child Theme

If you want to use Law Firm Child Theme, please follow these steps:

1. First of all, make sure that parent theme folder is named: law-firm. Otherwise rename the folder.
2. You should be able to find the folder law-firm-child in the package you have downloaded from ThemeForest.
3. Please copy this folder to /wp-content/themes folder on your server.
4. Go to Appearance > Themes in your wp-admin console and activate child theme. Please have in mind that all required plugins need to be activated.

For more info, refer to the article [Child Theme](#).

If you like our product please consider [leaving us a rating](#). A huge thank you from BoldThemes in advance!

4. Creating Pages and Posts

INTRODUCTION

Creating Pages and Posts

In this section you can find all the information needed to create your pages, your blog posts and your portfolio items.

SECTION 01

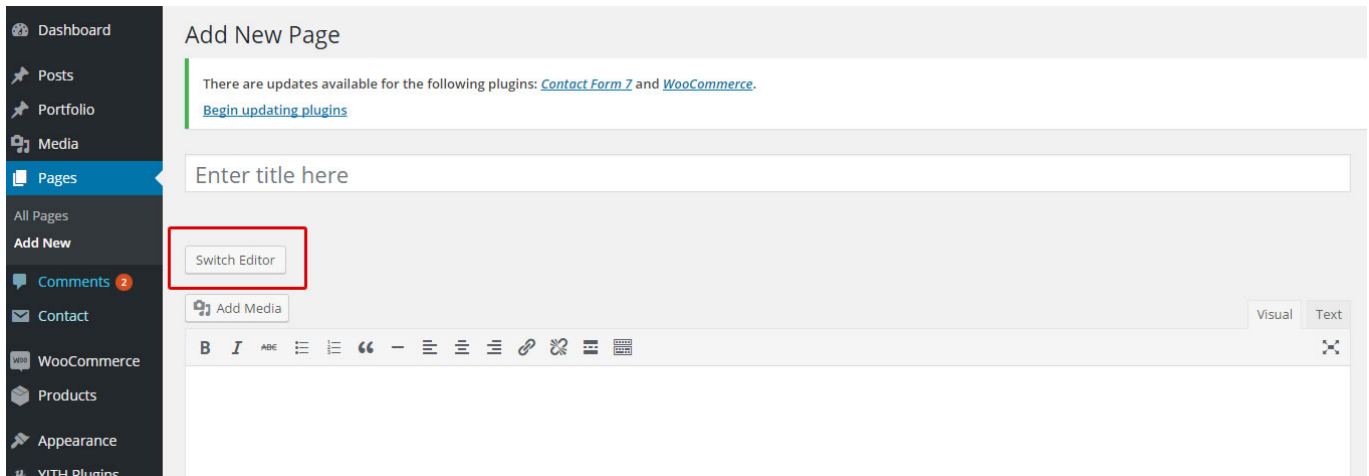

Creating Pages

Simple pages are usually referred in WordPress as static contents. That means that the information displayed on a page doesn't change, or doesn't change often. A great example of a page would be the About or Contact Us section of a website.

To create a new Page you need to follow this steps:

1. Navigate to Pages in your wp-admin sidebar and click Add New option.
2. Input a new name for your page, then enter the content using Bold Builder. If you do not see the Bold Builder's interface, please click the Switch Editor button at the top of the page edit form
3. Set page settings and add Override Global Settings if needed.

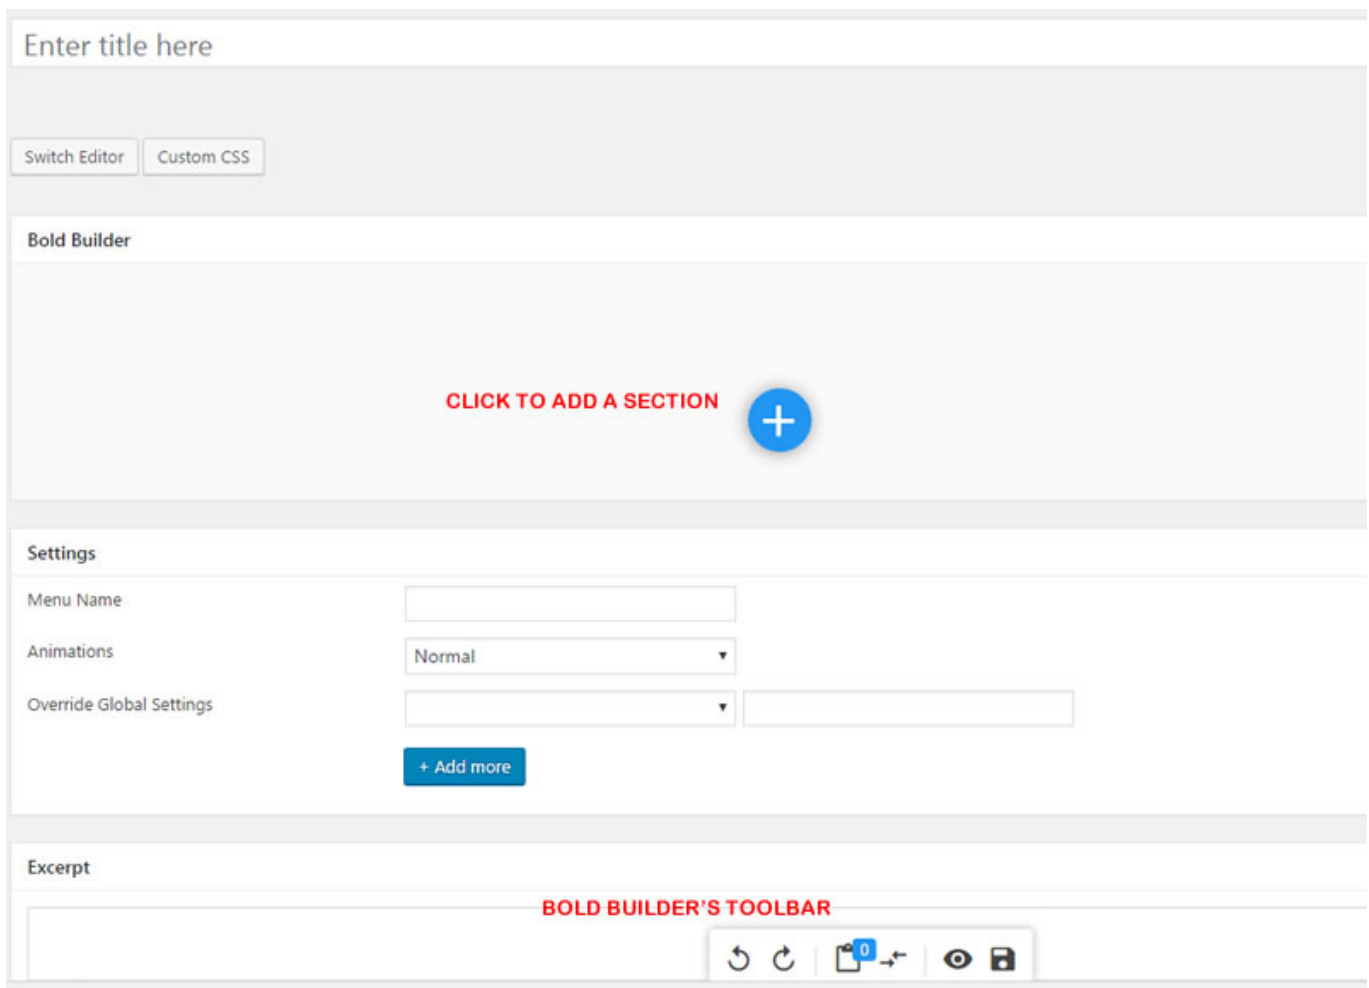

When you create a page you will see **Switch Editor** button. If you do see classic WordPress' HTML editor, please click Switch Editor button to get Bold Builder editor.

SECTION 02

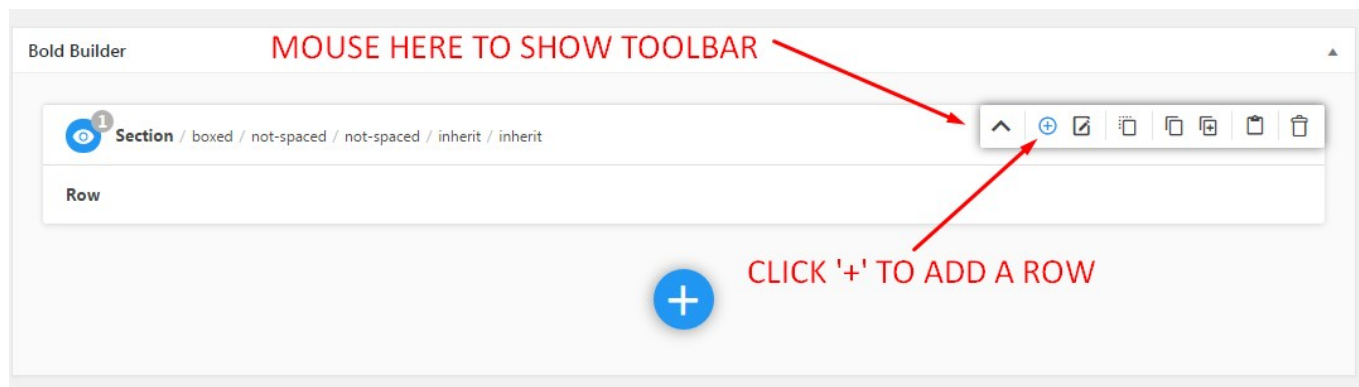

Bold Builder

Once you do that, you will see box with big '+' button. Click on it to add a section which is basic content element in Law Firm theme.

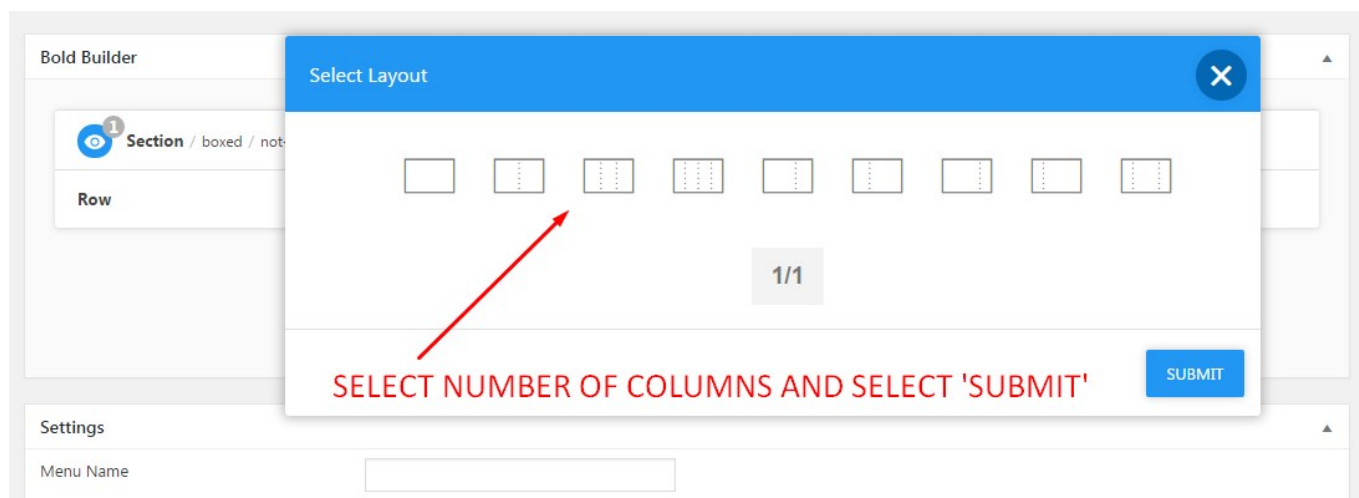

In the lower part of screen you can see Bold Builder main toolbar. Main toolbar options are:

1. Undo – you can undo your changes to page layout using this button
2. Redo – you can redo your changes to page layout using this button
3. Paste – you can paste clipboard contents to the bottom of the page layout. Just next to the paste button you can see a number which represents the number of items currently present on the clipboard
4. Clipboard Manager. This is unique feature of Bold Builder. You can easily copy and paste contents between different web sites. Once you click clipboard manager button, and then click Export, Bold Builder exports
5. Preview – the same as Preview button on the Page edit form – by clicking on it you can preview the current page layout
6. Save – the same as Update button on the Page Edit Form – updates the layout of the page by saving the changes not essential for content creation so we will skip them (you can learn more about Bold Builder if you take a look at documentation which comes with it).

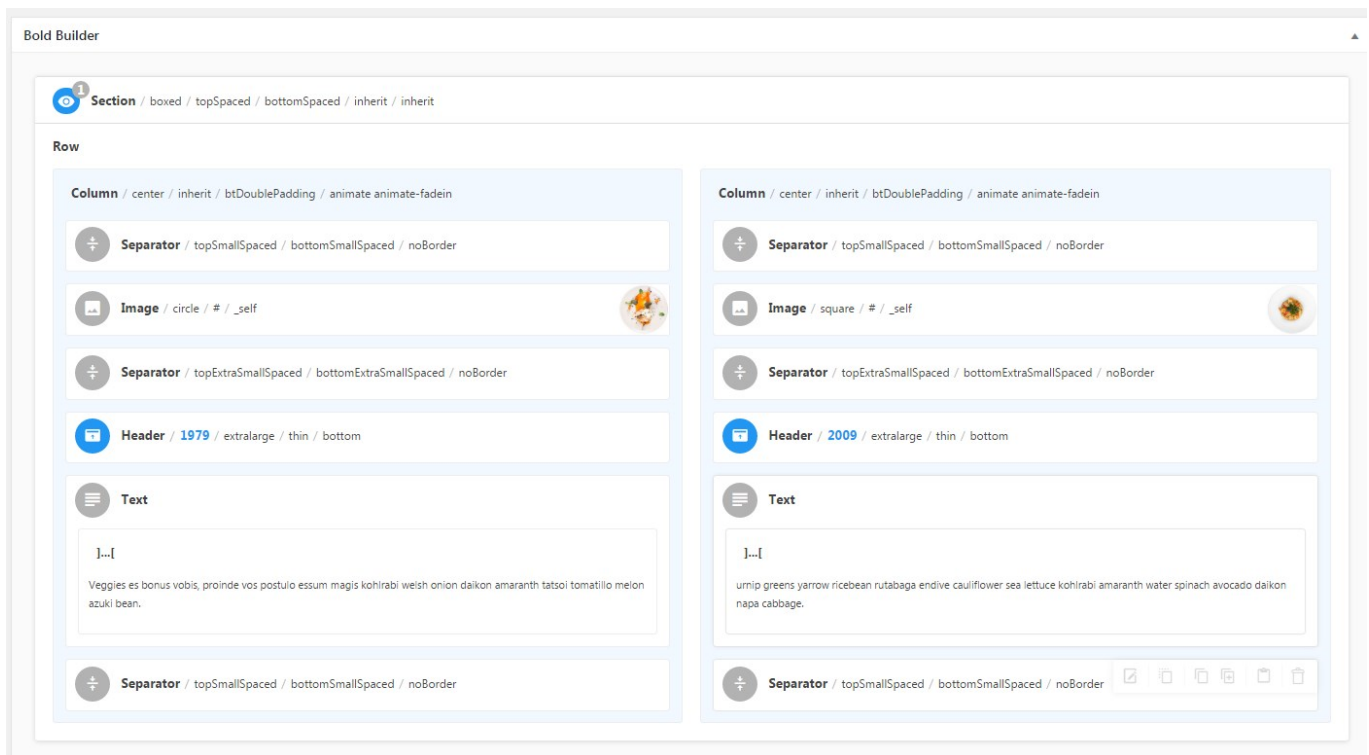

Next, place your mouse pointer over top area to show toolbar. Click '+' to add a Row which is another basic content element. Now click '+' in Row toolbar to add columns.

From Select Layout dialog you need to pick wanted layout of columns, e.g. 1/2+1/2 will add two columns with same width.

Now when you have columns, you can repeat same process to add some content to columns:

You can rearrange elements using drag and drop, clone and clipboard commands.

To edit content element properties, click Edit icon from element toolbar.

You will see Edit dialog with various options, depending on which shortcode you are editing:

#

Target

Self

SUBMIT

All sections, rows, columns or elements can be copied and pasted on pages.

To use custom menu on a page, just enter menu name in Menu Name input box.

To use full screen animations select animation type from Animations. Section elements settings Animation(forward/backward) or Impress Animation Settings need to be defined if you want to use full screen animations. Please see demo examples for more information about animations.

The best (and fastest) way to learn more about content creation and individual shortcodes (content elements) is to import demo and explore demo content.

SECTION 03

Override Theme Settings on Pages

As mentioned in section 3 – Theme customization, all global settings can be overridden on any single post or page. In Settings box, you will find Override Global Settings dropdown which allows you to choose which setting you want to override.

To override menu, just enter menu name in Menu Name field.

The possible values for the settings can be found in [section 3](#), in angle brackets next to the setting name. If you want to reset a setting to default value, just enter 'null' (without quotes). Click '+' button to add new override and '-' button to remove previously entered override.

Please have a look at the following example: Law Firm demo

Override Global Settings

Meta Description

Enter post description here. This will be used in description meta tags.

Images

Click Select or Upload Images to create gallery or add just a single image.

Grid Gallery

Check Grid Gallery to create grid gallery, otherwise gallery is displayed within a slider. Do not forget to upload the images you want to display as gallery and check Gallery Format in the Format box.

Grid Gallery Format

Enter format of images as comma separated values, e.g. 21,22,11,12 means first image has 2:1 aspect ratio, second 2:2, third 1:1, etc.

Video

In order to add Video post, enter Vimeo video URL, YouTube video URL or custom video shortcode in the Video field. Do not forget to check Video format in the Format box.

Audio

If you want to create the Audio post, Audio field is where you enter audio shortcode or SoundCloud iframe embed code. Do not forget to check Audio format in the Format box.

Link and Link URL

In order to create Link Post, enter link title in Link field and link URL in Link URL field.

Do not forget to check Link format in the Format box.

Quote and Quote Author

To create quote post enter data in Quote and Quote Author fields.

Do not forget to check Quote format in the Format box.

Tile Format

This format will be used in Grid content element for image which represents current post (featured image).

Override Global Settings

As with pages, here you can override global settings.

SECTION 05

Creating Portfolio Posts
